

ABOUT ME

I've spent over a decade building for the web, from small business sites to full-scale applications, leading both design and development teams along the way. These days, I'm focused on modern application architecture — React, Next.js, and increasingly, AI systems and prompt engineering. I care about building things that are clean, reliable, and genuinely useful, and I'm drawn to problems that blend technical depth with real-world impact. Always learning, always building, always looking for the next hard problem.

EXPERIENCE

BIOINSIGHTS

May 2026 - July 2026

AI Systems Engineer

As an AI Systems Engineer, I work at the intersection of clinical reasoning, AI architecture, and structured knowledge design — building the prompt chains, RAG pipelines, and governed AI workflows that turn patient data into structured, defensible clinical artifacts clinicians can trust and sign. This means deep work in JSON knowledge architecture, ontology design, retrieval schemas, and multi-step agentic workflows, all built to keep AI scoped, explainable, and human-in-the-loop.

VERIHEAL

Jan 2025 - May 2026

IT Manager

In my role as IT Manager, I oversee core infrastructure and security operations, including company-wide VPN administration, cPanel/WHM environments, and Google Workspace. I manage enterprise identity and access through Okta and lead deployment and support of Cylance and Arctic Wolf security platforms. I also support cloud initiatives across multiple AWS services. In addition to infrastructure responsibilities, I partner closely with cross-functional teams to deliver development initiatives and provide project and sprint management to ensure successful execution and alignment with business objectives.

VERIHEAL

Jul 2023 - Jan 2025

Lead Developer

As a Lead Developer, I manage development projects and timelines, overseeing a global team of developers to ensure timely delivery. I organize and facilitate weekly standup meetings to align team efforts and address challenges effectively. Collaborating closely with marketing and sales teams, I ensure technical solutions align with business objectives. I also design and maintain scalable infrastructure in AWS to support the company's growth and contribute to frontend development using PHP, HTML, CSS and JavaScript, enhancing user experience and functionality.

FREELANCE

2021 - 2023

Freelance Web Developer

As a freelance developer I have worked along side clients all over the country building and maintaining websites. Most of these sites demanded custom solutions, so I had the opportunity to showcase my HTML and CSS skills. I also get to work with people that are passionate about their business, making the process much more energetic and fun.

DAXKO

Web Developer/Team Lead

Jun 2020 - Aug 2021

As lead developer and team lead, I was responsible for building complex and custom websites for large YMCA organizations and health clubs. I also made sure our team of web designers and UI/UX designers met deadlines and were working towards our goals.

RUBY SHORE SOFTWARE

Wordpress Developer

May 2017 - May 2020

Ruby Shore is a small software company that thrives on solving problems. My job was to build beautiful and functional websites for our clients. I was in charge of every step in development from the first meeting with the client, all the way to launching the site. I worked in WordPress every day and constantly use my HTML, CSS and JS skills to make the website perfect.

SKILLS/TECHNOLOGY

- WordPress
- HTML
- CSS
- Javascript
- jQuery
- PHP
- Node.js
- AWS
- SCSS
- SSO (Okta)
- MDM (Jumpcloud, Hexnode)
- Prompt Engineering
- Google Workspace, Microsoft 365
- Endpoint Security
- VPN (GoodAccess)
- cPanel/WHM
- Project Management
- Sprint Planning
- RAG
- JSON
- Vercel
- Firestore
- Supebase
- Git/Github
